

PNWSpot Remote Screen Setup Guide

Please Note:

First, this guide was made using Pi-Star version 4.1.3. Older or newer versions may behave somewhat differently.

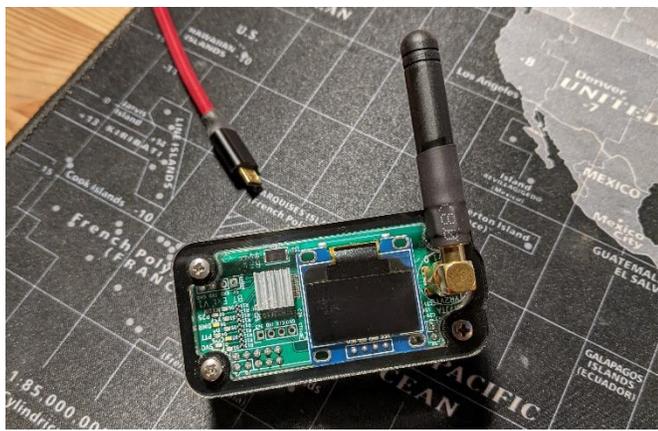

Second, there are two options for using your external Nextion display. The first method uses default, “basic” drivers that will display information on the screen but will not allow for touchscreen functionality.

The second, more involved method includes installing a more advanced driver, called NextionDriver, which allows for touchscreen functionality.

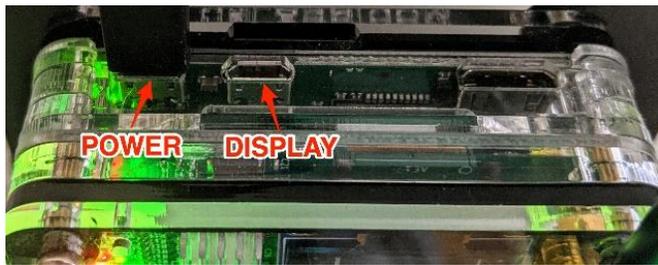

Steps 1-3 are the same for both methods.

Steps 4-8 are for the basic method

Steps 9, 10 – end are for the advanced method.

1.
Start off with your PNWSpot unplugged.

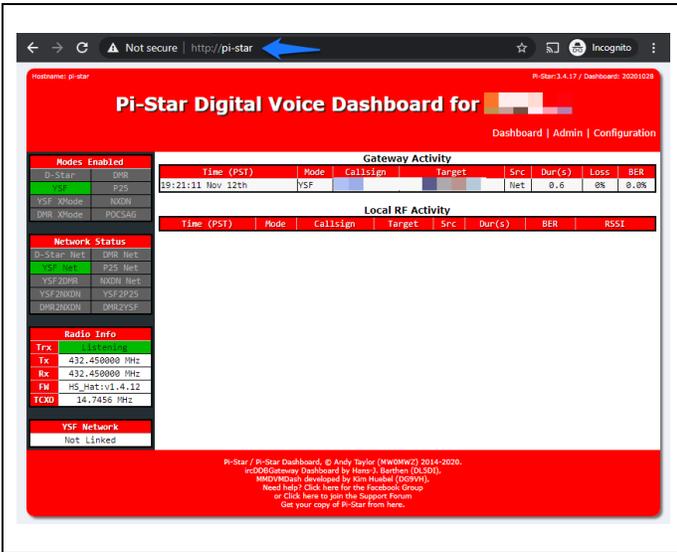

2.
Plug in your Nextion screen to the inside MicroUSB connector.

3.
Plug your PNWSpot in.

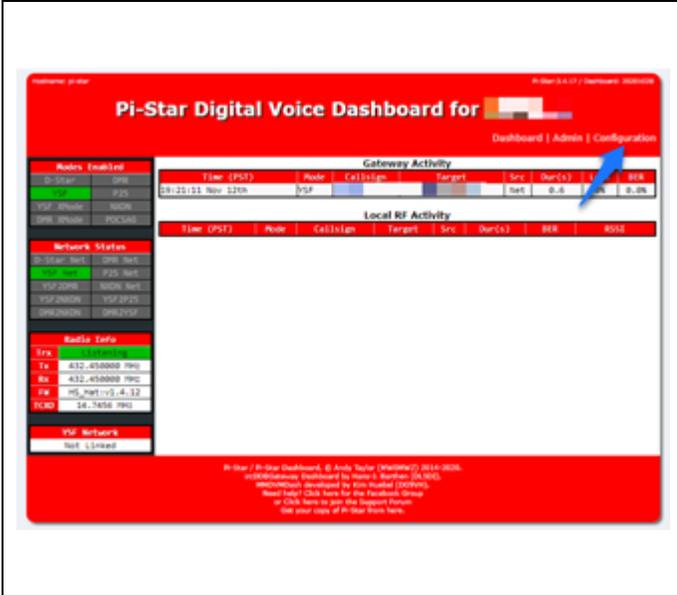

Initially, the screen will be blank, and the red SVC light will be blinking slowly. Once booted, the red SVC light will be blinking quickly.

PNWSpot Remote Screen Setup Guide

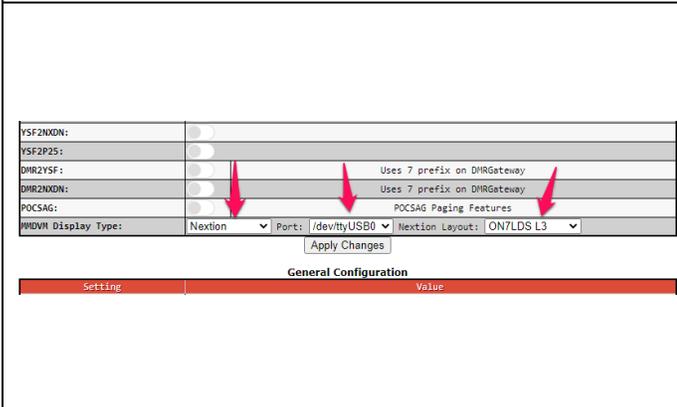

4. Once booted, open your browser and head to: <http://pi-star> OR <http://pi-star.local>

This will open the PNWSpot's dashboard

5. Click "Configuration" to open the configuration page.

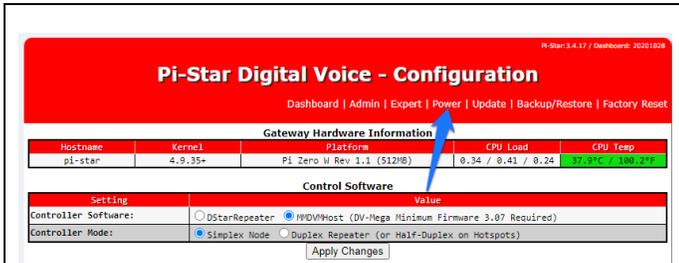

If prompted to login, login using:
Username: pi-star
Password: raspberry

6. On the configuration page, scroll down to the MMDVMHost Configuration section, and set MMDVM Display Type Settings as follows, and apply changes:

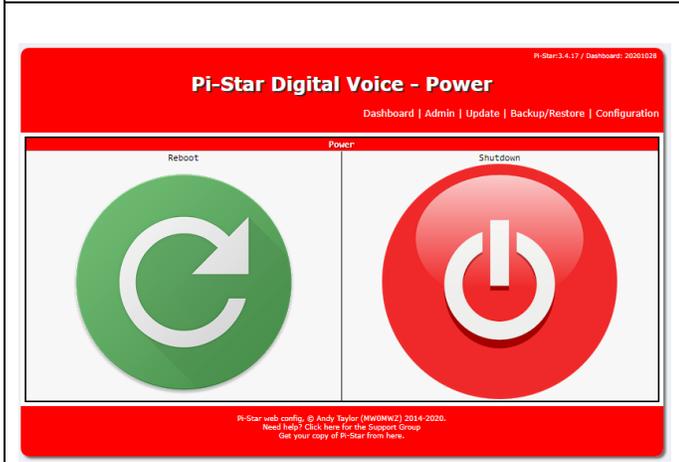

MMDVM Display Type: Nextion
Port: /dev/ttyUSB0
Nextion Layout: ON7LDS L3

PNWSpot Remote Screen Setup Guide

7.

After applying changes, you may need to reboot the hotspot using the Power menu, at the top of the configuration page.

8.

Select Reboot and the hotspot will restart, using the external Nextion display instead of the internal OLED display.

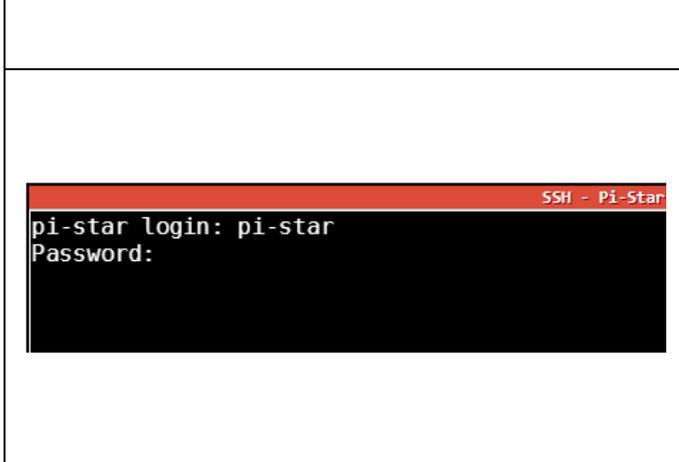

Until power is completely removed (unplugged) and re-applied, the internal OLED display may still show "close".

9.

To install the more advanced NextionDriver files, we must head to SSH Access.

SSH Access is located under Expert > SSH Access

10.

You will first be prompted to login to Pi-Star. Hit enter after entering each item.

Username: pi-star
Password: raspberry

Note: when entering password, nothing will show, this is normal. Just enter the password and hit enter.

PNWSpot Remote Screen Setup Guide

```
The Pi-Star Dashboard can be found at one of the following locations:
http://pi-star/ http://pi-star.local/ http://192.168.1.140/

Pi-Star's disk is read-only by default, enable read-write with "rpi-rw"
Pi-Star built by Andy Taylor (MW0MWFZ), pi-star tools all start "pi-star"

Welcome to Pi-Star: v4.1.3

pi-star@pi-star(ro):~$ rpi-rw
```

11.
First, we need to delete any previous versions of NextionDriver.

Enter:
`rpi-rw`
and hit enter

You will now see "(rw)" at the end of the green text, letting you know you are now in "read-Write" mode, instead of "Read Only" mode (ro).

```
The Pi-Star Dashboard can be found at one of the following locations:
http://pi-star/ http://pi-star.local/ http://192.168.1.140/

Pi-Star's disk is read-only by default, enable read-write with "rpi-rw"
Pi-Star built by Andy Taylor (MW0MWFZ), pi-star tools all start "pi-star"

Welcome to Pi-Star: v4.1.3

pi-star@pi-star(ro):~$ rpi-rw
pi-star@pi-star(rw):~$ sudo rm /usr/local/bin/NextionDriver
```

12.
Next, we will delete the NextionDriver files, if they exist.

Enter:
`sudo rm /usr/local/bin/NextionDriver`
and hit enter

```
PI-STAR

The Pi-Star Dashboard can be found at one of the following locations:
http://pi-star/ http://pi-star.local/ http://192.168.1.140/

Pi-Star's disk is read-only by default, enable read-write with "rpi-rw"
Pi-Star built by Andy Taylor (MW0MWFZ), pi-star tools all start "pi-star"

Welcome to Pi-Star: v4.1.3

pi-star@pi-star(ro):~$ rpi-rw
pi-star@pi-star(rw):~$ sudo rm /usr/local/bin/NextionDriver
pi-star@pi-star(rw):~$ █
```

13.
This will occur very quickly, and once you see a third line of green text, it will be done.

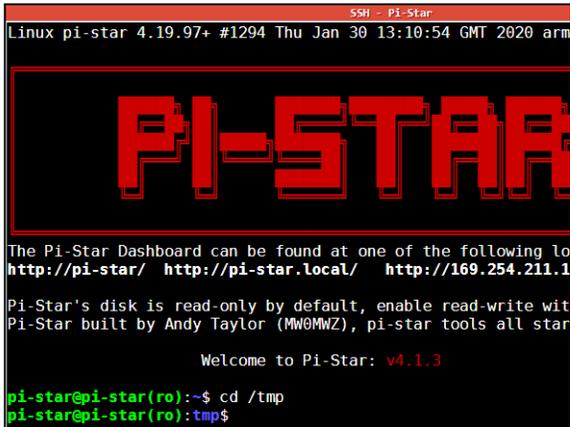

At this point, go back to Configuration > Power and restart your hotspot.

You may get a warning that changes have not been applied, but this can be ignored.

PNWSpot Remote Screen Setup Guide

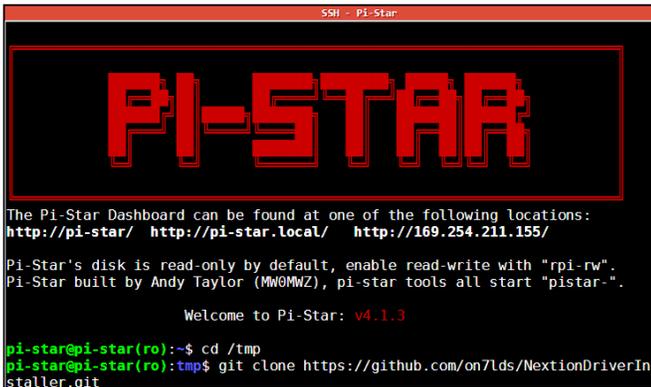

14.
After reboot, head back to SSH Access and login again.

15.
Next, we need to change to the temporary directory.

Enter:
`cd /tmp`
and hit enter

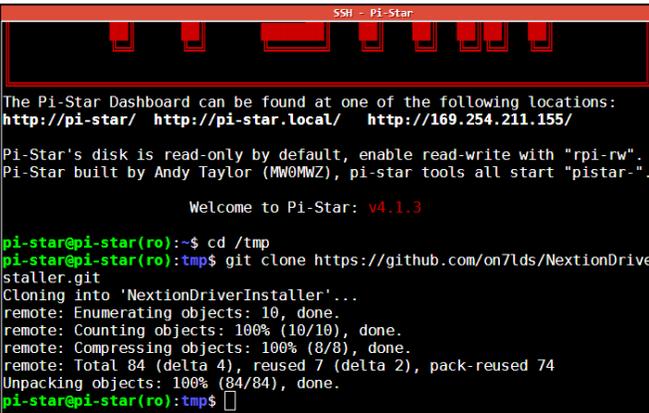

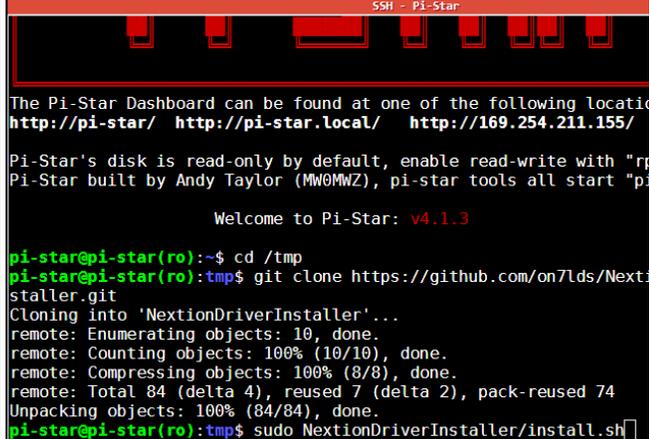

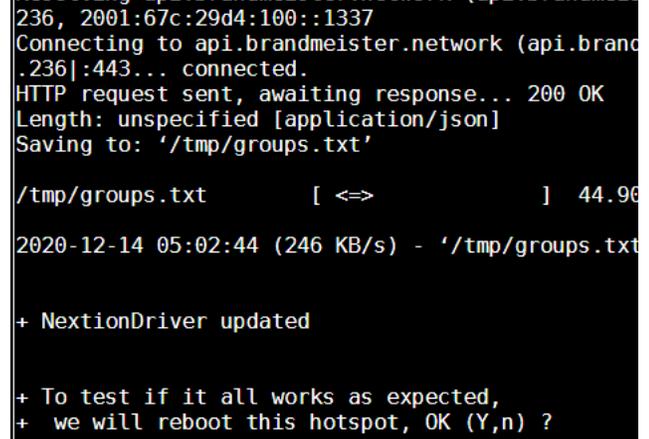

The green prompt changes to include “tmp\$” which tells us it has changed to the tmp directory as we instructed.

16.
Now, we must download the driver to the tmp directory.

Enter:
`git clone https://github.com/on7lds/NextionDriverInstaller.git`
And hit enter

| | | Nextion Layout: ON7LDS L3 |
| Apply Changes | | |

| Setting | Value |
|-----------|---|
| Hostname: | pi-star <input type="checkbox"/> Do not add suffixes such as .local |

21. Once rebooted, we need to ensure settings are correct for using the screen. First, on the configuration page, make sure the MMDVM Display Type is set to:

Type: Nextion
 Port: /dev/ttyNextionDriver
 Layout: ON7LDS L3

Change and apply changes if needed.

| Latitude | 50.00 |
| Longitude | -3.00 |

22. Next, we need to change the port that NextionDriver uses, to the USB port. Access the Expert menu (at the top) and the MMDVMHost Page

| NextionDriver | |
|-----------------|-----------------|
| Port | /dev/ttyUSB0 |
| DataFilePath | /usr/local/etc/ |
| LogLevel | 2 |
| GroupsFile | groups.txt |
| DMRFile | shipped.csv |
| #DMRidDelimiter | |
| #DMRid1 | 1 |
| #DMRidCall1 | 2 |
| #DMRidName | 3 |
| #DMRidX1 | 4 |
| #DMRidX2 | 5 |
| #DMRidX3 | 7 |
| ShowModeStatus | 0 |

23. Scroll Down to the NextionDriver section, and ensure that Port is set to **/dev/ttyUSB0**

Enter this if needed, and apply changes.

24. Once applied, head back to the power menu and restart the hotspot.

After a reboot, you may need to physically pull and re-apply power to do a full restart.
